"Max"

The daily help in the stable and the yard

Scraper "MAX"

"MAX" - Feeder

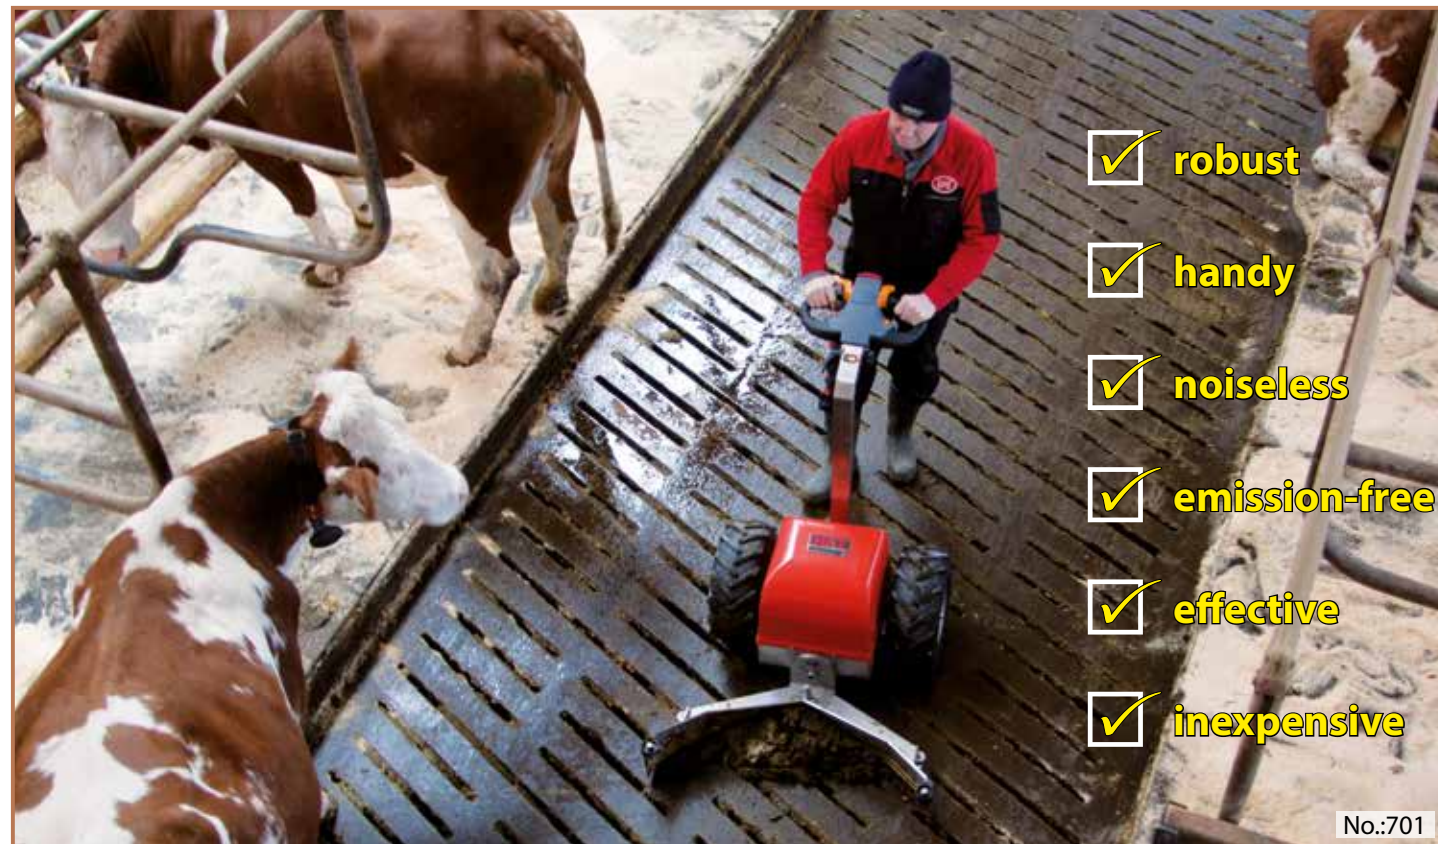

Kombi "MAX"

The battery-powered device in 3 versions

"Max" - Daily help, easy to use

The scraper facilitates the daily work in the barn enormously - without effort

Benefits that are impressive

Gimbal-mounted slide for optimum ground adaption

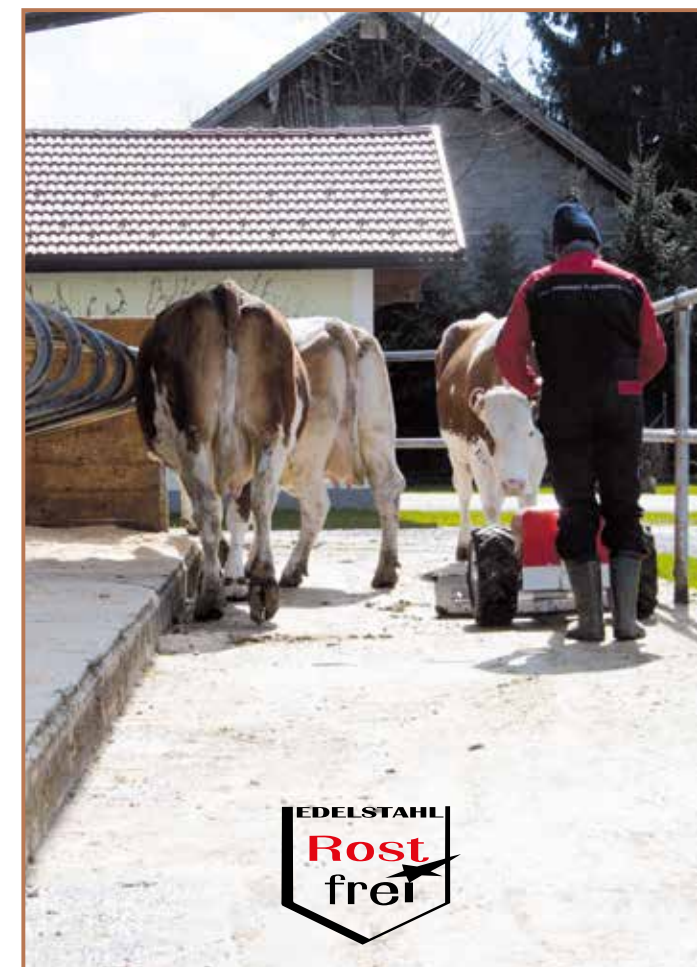

Compact design

Standard body protection button for tight areas

Cross separations easily accessible

Quiet, emission-free and no stress for your animals

Water troughs are no obstacle

Easy pushing of the feed

"Max" - the battery - powered scraper

"Max" - the scraper facilitates the cleaning work in the barn enormously and is also a valuable assistant for pushing the feed.

The ergonomically shaped **tiller head** enables relaxed operation of the scraper. It combines all important details to a central operating unit.

1 Main switch

2 Integrated battery charge indicator

3 With a **slide control** the driving speed can be pre-selected.

4 The **rocker-switch** for forward driving and reversing can be operated with the right or left hand and sets the device continuously in motion.

5 The most important safety detail is the red **body protection button**, which protects the operator against entrapment when driving backwards in narrow stables.

6 The **battery charging plug** is attached in front of the tiller head at the bottom of the drawbar tube protected from dirt and damage.

7 The height of the **control panel** can be adjusted.

8 **Scraper and chassis:**

The entire structure of the scraper and the slider head are made of stainless steel and therefore absolutely rust-free. This is a serious advantage and guarantees you a long service life. The slider head is gimbal-mounted on the chassis and can be optimally adapted to unevenness of the spout. The low-wear cleaning strip made of polyurethane on the slider can be turned and saves additional cash. All screw connections are also made of stainless steel. The short construction is an advantage in narrow stables.

9 **Batteries:**

The power comes from 2 maintenance-free 12V AGM batteries that are charged via a regulated 220V charger. They are placed directly above the driving unit and are easily accessible. The impact-resistant hood made of polycarbonate protects it from cold, dirt and moisture.

✓ **robust**

✓ **handy**

✓ **noiseless**

✓ **emission-free**

✓ **effective**

✓ **inexpensive**

10 **Driving unit:**

The maintenance-free driving unit has a very strong 24V engine and directly via a differential gear (no chains or V-belt). This allows the scraper to steer very easily and allows a relaxed driving style even in very large farms. The built-in controller provides a soft start and controls all processes.

11 **Tires:**

We use large and very wide tires as standard to get good grip on any surface. In addition, the tires are filled with antifreeze to bring the enormous thrust to the ground. Thanks to the tractor profile the tires can easily be cleaned.

12 **Rollers:**

For comfortable sliding along the cubicles or walls.

13 **Screw:**

The contact pressure of the scraper can be adjusted.

With the compact dimensions, you can easily negotiate obstacles such as: water troughs, cross separations and the like. The zero-emission and noiseless driving unit of the scraper ensures stress-free use in the cattle shed.

Soil will become drier and less-grained, and the risk of transmitting claw diseases will be greatly reduced - your cattle will thank you.

The professional association has tested our device and awarded us for the ease of use and safety features.

Convenient slatted floor and stable area cleaning

Ergonomically shaped tiller head for relaxed operation

Height-adjustable operating unit

Side run-up rollers mounted on the scraper

Wide tires - filled with antifreeze

Easy to clean thanks to smooth surfaces

The valuable helper in the stable and the yard

Versatile and easy to handle

Regulated charger with wall bracket

Battery charging plug protected attached

Charging plug with strain relief and handle

Cleaning strip made of polyurethan (reversible)

The entire construction of the battery-powered professional unit is completely made of stainless steel, and therefore a guarantee for a long life.

The coupled, swiveling plate is attached close to the drive unit, which has a very positive effect in narrow stables. The extendable feed deflectors ensure that no leftover feed can wrap over the axle.

The drive via differential gear with 24V motor is very high quality and absolutely maintenance-free. The smooth operation of the slider is done via a comfortable tiller head with integrated body protection button, which makes it completely impossible to pinch the operator when driving backwards. The maximum speed can be pre-selected via a slide control. The battery charge indicator and the main switch are very clearly integrated in the ergonomically shaped tiller head. The impact-resistant plastic hood protects the maintenance-free gel batteries and ensures optimal use of the device even at very low temperatures. The emission-free drive of the slide works whisper-quiet and ensures stress-free use in the barn.

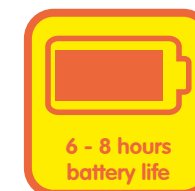

The wide tires provide optimum grip on any surface and are easy to clean.

Threefold swiveling plate

Extendable feed deflector for hay

NEW **KOMBI Max** *For quick change of tools*

Bone-hard work has become child's play on hundreds of farms throughout Europe since 2012. Thanks to our popular "Max" battery devices, which keep the slatted floors and spouts clean or help with feeding the animals.

The great demand for an even more flexible machine has resulted in the development of a unique quick-change system. With this it is possible to couple different tools effortlessly and within seconds to the basic device.

SCRAPER Max

For slatted floor and stable outside area cleaning

HAY Max

Practical helper for pushing hay, grass and silage

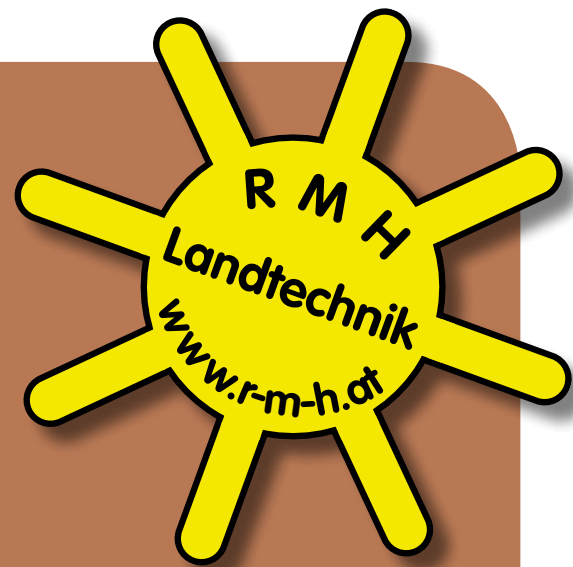

SNOW Max

Effortless snow removal • fivefold adjustable
